

# AQUA PlantArium

POND \* VIVARIUM \* AQUARIUM \* TERRARIUM \* PALUDARIUM \* WATER-GARDEN

## Philopsophy Behind The BIO BOX

by Lammert deHaan (Inventor)

After a lifetime studying Freshwater Fish & Aquariums I have learned that "The Laws Of Nature" are key to successful Aquarium Keeping. With that in mind I developed the AQUAPLANTARIUM. A NEW Go Natures Way Aquarium that is Bio Ready no New Tank Syndrome using Aquatic Plants & Soil. No body of water exists without it!

When Fish are added to a new Aquarium they produce waste like ammonia and nitrite which builds up and becomes harmful to the fish. In established tanks bacteria breaks down this waste. Traditionally this cycling process called the Nitrogen Cycle can take weeks or months, our Bio Box has the Bacteria, Soil plus Sediment to instantly cycle your tank so you can enjoy it within hours. This is not just one-time start up quick fix. The Bio Box keeps your Aquarium cycled.

The Bio Box is placed underneath a layer of gravel. The Roots of the Aquatic Plants settle into the layer of terrestrial soil, lake sediment & organic matter. This provides all the Bacteria Minerals & Trace Elements needed for healthy thriving Aquatic Plants. NO NEED FOR SUPPLEMENTS. Its design keeps gravel from sinking into the dirt & keeps sediment particles from floating into the tank so NO dust clouds. Even when plants are pulled out, the sediment stays under the gravel where it belongs.

Healthy Aquatic Plants are Key to Success THE BIO BOX KEEPS PLANTS HEALTHY

Aquatic plants are very important as they filter the Aquarium by absorbing ammonium, nitrate & phosphate while providing oxygen. Plants improve water quality naturally while providing a stress-free environment by absorbing toxic heavy metals such as Cadmium, Copper, Lead & Zinc. Fish have less Stress - Eat More - Healthier Fish  
Additionally healthy growing Aquatic Plants compete with algae so they cannot grow.

## GUARANTEED SUCCESS

### AQUAPLANTARIUM

#### Push Glass Window

(Patent Pending)

Easy to open with a simple Push \* Unique Pond Like View  
Easy Access No lights No Canopy to Remove \* Transforms into  
an Enclosed Habitat \* Optimal Humidity for Tropical Plant Growth

#### Bio Box

(Patent Pending)

Contains Terrestrial Soil, Lake Sediment & Organic Matter  
with a High Volume of Natural Bacteria Minerals plus Trace Elements  
Have a Cycled Aquarium within Hours

No New Tank Syndrome

Soil stays inside Bio Box \* No Floating Particles or Dust Clouds  
Plant Roots Grow through the Gravel into the Sediment for  
Optimum Aquatic Plant Growth \* NATURES WAY

#### Bio Media Filter

Water runs through the Gravel into the Bio Media Filter using a  
Power-head Pump where Bacteria grows to break down Waste  
Low Maintenance **NO** Filter Media **NO** Filter Cartridges **TO BUY**  
**NO** Chemicals Needed

#### Background Ledge & Waterfall

Water-fall Feature adds Scenic Beauty \* Background has Space  
to add Tropical Plants \* Ledge Provides Resting Area for  
Amphibians or other Creatures like Crabs, Shrimp, Mud Skippers,  
Frogs, Countless other Possibilities \* Be Creative Create your Own OASIS  
(Post your AquaPlantarium on YouTube)

#### Energy Saving Light Fixture

Low Energy Cost with Easy to replace High Output Spiral Bulbs

## \$\$SAVE MONEY

NO FILTERS NO CARTRIDGES  
TO BUY or CHANGE - LOW COST BULBS
